

Nidec

FLEXWAVE

The Next Generation

WP Series
The Highest Precision

NIDEC DRIVE TECHNOLOGY CORPORATION

FLEXWAVE

Relentless Refinement of Technology

The *Next Generation* Nidec FLEXWAVE high precision gear reducers offer machine designers virtually unlimited flexibility and adaptability when designing highly innovative drive mechanisms. Standard configurations include; component sets, self-contained assemblies, and complete gear units ready to mount to standard servomotors with pre-assembled innovative standard motor mounting kits.

The *Next Generation* Nidec FLEXWAVE optimized tooth profiles combined with the Nidec Corporation core competencies of manufacturing high precision components at scale offer the most robust solutions with the highest reliability rates available to meet the most demanding application requirements where performance is guaranteed.

The *Next Generation* Nidec FLEXWAVE Cup style and Top Hat style Flex gears combined with solid or hollow input shafts extend the possibilities for integrating into unique designs with Ultra Flat versions available for when space is tight and High Torque versions for the more demanding applications requiring high torque density.

All Next Generation Nidec FLEXWAVE high precision gear reducers are fully interchangeable with industry standards allowing designers to upgrade performance to existing designs by simply changing part numbers on the bills of materials.

- Exceptional Repeatability and Positional Accuracy
- Zero Backlash
- High Torque Density
- High Efficiency Ratings
- Lightweight and Compact
- High Torsional Stiffness

The Next Generation Nidec FLEXWAVE - proving to be the superior choice for the next generation drive mechanisms in Robotics, Machine Tool, Medical Equipment, Semiconductor Manufacturing, Satellite Communications and Assembly Automation applications.

Strain Wave Technology

Reduction mechanism

- Flex gear and elastic bearing take elliptic shape with cam inserted.
- Elliptical cam input is inserted into Flex gear and then mounted into internal gear; the flex gear engages the internal gear in 2 locations 180° apart. This allows for high torque in a compact stable manner.
- With internal gear fixed and cam (input) rotated clockwise, the flex gear (output) rotates counter clockwise. Direction and speed of rotation is determined by tooth count of gears and mounting geometry.

Closed type

Open type

Reduction ratio

$$\text{Reduction ratio} = \frac{-1}{R}$$

$$\text{Reduction ratio} = \frac{1}{R+1}$$

* The input and output rotation directions are opposite.

* "R" represents the "Ratio" figure in the specifications table on the next page.

* The input and output rotation directions are same.

*1 Reduction ratio is to be calculated by the formula in the previous page, using R value in this table.

*2 The maximum allowable value at the input rotation speed of 2000r/min

*3 The maximum torque when starting and stopping.

*4 The maximum torque when it receives shock.

*5 The maximum average input speed.

*6 The maximum input speed.

*7 The life time at the input rotation speed of 2000 r/min and nominal output torque.

Life Estimation (Elastic Bearing)

Life span for the elastic bearing

Operation cycle example

Calculation formula for output torque

Average output torque	Tao	Nm	$Tao = \sqrt[3]{\frac{n_1 \cdot t_1 \cdot T_1 ^3 + n_2 \cdot t_2 \cdot T_2 ^3 + \dots + n_n \cdot t_n \cdot T_n ^3}{n_1 \cdot t_1 + n_2 \cdot t_2 + \dots + n_n \cdot t_n}}$
Peak output torque value	Tmo	Nm	$Tmo = \text{maximum value of } T_1, T_2, \dots, T_n$

Please make sure the peak output torque is below the maximum output torque in the specification table.

Calculation formula for input speed

Average output rotation speed	nao	r/min	$nao = \frac{n_1 \cdot t_1 + n_2 \cdot t_2 + \dots + n_n \cdot t_n}{t_1 + t_2 + \dots + t_n}$
Peak output rotation speed	nmo	r/min	$nmo = \text{maximum value of } n_1, n_2, \dots, n_n$
Average input speed	nai	r/min	$nai = nao \times R \quad (R = \text{ratio})$
Peak input speed value	nmi	r/min	$nmi = nmo \times R \quad (R = \text{ratio})$

Please make sure the peak input speed value is below the maximum input speed in the specification table.

Calculation formula for life span

Part life span for the elastic bearing	Lhe	h	$Lhe = 10000 \times \left(\frac{Tar}{Tao} \right)^3 \times \left(\frac{nar}{nai} \right)$
Rating torque	Tar	Nm	<i>Nominal output torque in the specification table</i>
Rating input rotation speed	nar	r/min	2000 r/min

Life span for the main bearing

Operation cycle example

External load

Life Estimation (Main Bearing)

Calculation formula for the largest working moment

Peak working moment	Mm	Nm	$Mm = Frm \cdot (Lr + L) + Fam \cdot La$
Peak radial load	Frm	N	$Frm = \text{maximum value of } Fr_1, Fr_2, \dots, Fr_n$
Peak axial load	Fam	N	$Fam = \text{maximum value of } Fa_1, Fa_2, \dots, Fa_n$

Please make sure the peak working moment is below the maximum allowable moment.

Calculation formula for the Average radial load, Axial load, Average output rotation speed, Average working moment

Average radial load	Fra	N	$Fra = \sqrt[10/3]{\frac{n_1 \cdot t_1 \cdot Fr ^{10/3} + n_2 \cdot t_2 \cdot Fr_2 ^{10/3} + \dots + n_n \cdot t_n \cdot Fr_n ^{10/3}}{n_1 \cdot t_1 + n_2 \cdot t_2 + \dots + n_n \cdot t_n}}$
Axial load	Faa	N	$Faa = \sqrt[10/3]{\frac{n_1 \cdot t_1 \cdot Fa_1 ^{10/3} + n_2 \cdot t_2 \cdot Fa_2 ^{10/3} + \dots + n_n \cdot t_n \cdot Fa_n ^{10/3}}{n_1 \cdot t_1 + n_2 \cdot t_2 + \dots + n_n \cdot t_n}}$
Average output rotation speed	nao	r/min	$nao = \frac{n_1 \cdot t_1 + n_2 \cdot t_2 + \dots + n_n \cdot t_n}{t_1 + t_2 + \dots + t_n}$
Average working moment	Ma	Nm	$Ma = Fra \cdot (Lr + L) + Faa \cdot La$

Calculation formula for the Loading factor, Equivalent radial load

Loading factor	Xc, Yc	-	$\frac{Faa}{Fra + 2Ma / Dm} \leq 1.5 \text{ in the case of, } Xc = 1.0, Yc = 0.45$
			$\frac{Faa}{Fra + 2Ma / Dm} > 1.5 \text{ in the case of, } Xc = 0.67, Yc = 0.67$
Equivalent radial load	Pc	N	$Pc = Xc \cdot (Fra + 2Ma/Dm) + Yc \cdot Faa$

Life span for the main bearing

Life span for the main bearing	Lhc	h	$Lhc = \frac{10^6}{60 \cdot nao} \cdot \left(\frac{C}{f_w \cdot Pc} \right)^{\frac{10}{3}}$
Impact factor	f w	-	1.0: no shock
			1.2: with some shock
			1.5: with shock and vibration

Maximum Load at Input Shaft

Lubricant Information

Grease

Sumiplex SFB No.1 (SUMICO LUBRICANT CO., LTD.)

Operating temperature range: 0~40°C (ambient temperature)

Grease application

- The quantity of grease applied to C should be adjusted depending on the mounting direction. C of the unit type product is already filled with the same quantity of grease as horizontal mounting.
- 50% of the space between input assy and casing inner wall should be filled with grease.
- If the amount of grease is not sufficient due to case design, please contact us.

Please apply grease according to the table below.

[grams]

Size	Applied part					
	A	B	C Horizontal	C Vertical Up	C Vertical Down	D

Transmitting Torque

Bolting

Refer to the table below for the bolt tightening torque.

Note that the transmittable torque varies depending on the bolt count (different between CF and CN) and tightening torque.

Tightening torque for bolts

Bolt Size	M3	M4	M5	M6	M8	M10
Tightening Torque [Nm]	1.9	4.3	8.7	15	36	71

Recommended bolt: Strength rating 12.9

Bolt specifications and transmitting torque (Closed Type, Unit)

Output flange attachment

Size	35	42	50	63	80
Bolt Size	M4	M5	M6	M8	M10
Bolt Count	6	6	8	8	8
Bolt PCD (mm)	23	27	32	42	55
Tightening Torque [Nm]	4.3	8.7	15	36	71
Transmitting Torque [Nm]	56	106	238	566	1177

Internal gear attachment (CR)

Size	35	42	50	63	80
Bolt Size	M4	M4	M5	M5	M6
Bolt Count	8	8	8	10	12
Bolt PCD [mm]	65	71	82	96	125
Tightening Torque [Nm]	4.3	4.3	8.7	8.7	15
Transmitting Torque [Nm]	210	230	430	629	1392

Transmitting Torque

Bolt Size	M3	M3	M3	M4	M5
Bolt Count	8	16	16	16	16
Bolt PCD [mm]	44	54	62	77	100
Tightening Torque [Nm]	1.9	1.9	1.9	4.3	8.7
Transmitting Torque [Nm]	82	200	230	498	1048

Input Section Structure

There are two types of input section structure, spline type (self-centering feature) and rigid type.

Oldham type (Self-centering)

Rigid type

Cam hole diameter

The diameter of the cam opening is customizable. Holes smaller than the 'standard hole size' in the table will be built in the spline type. Holes equal to or larger than the 'standard hole size' and smaller than the 'maximum hole size' will be built in the rigid type. Please contact us if you need sizes outside the specification in the table.

Cam dimension

[mm]

Size	35	42	50	63	80
Standard Bore Size	6	8	12	14	14
V Maximum Bore Size	17	20	23	28	36
V Minimum Thickness	6	7	8	9	11

Installation and Assembly Instructions

WPC-□-□-CR

Shaft installation instruction

Please design the support structure for input shaft and output shaft so that both radial and axial loads are supported. (Diagram below shows an example)

Inside thrust load has an effect on the cam. Secure cam from possible axial movement.

WPC-□-□-CR

Attachment flange requirement

For an attachment flange that comes in contact with flex gear, please build the corner radius according to the table below, in order to prevent damage.

Item	35	42	50	63	80	[mm]
D	24.5	29	34	42	55	
R	1.2	1.2	1.4	1.5	2	
t	2	2.5	2.5	5	7	

Warm-up run

After assembly, "Warm-up run" is necessary before run with load / torque. The purpose is to coat the Flex gear and Internal gear surface evenly with enough grease in order to meet the load / torque performance.

Condition example

- Load - No load
- Input rotation speed - Start slowly from 1,000r/min or less, then accelerate up to 3,000r/min
- Test time - About 1 hour
- Output rotation angle - As large as possible

Motor Installation Procedure

WPU-□-□-C□

Procedure 1

- Attach the flange on to the motor
- Attach the input section assembly with elastic bearings to the motor shaft
- Attach the unit

* This model is not directly attached to a motor. Necessary fixtures are to be prepared at the customer side.

Procedure 2

- Attach the input section assembly with elastic bearings to the motor shaft
- Attach the flange on to the motor
- Attach the unit

* This model is not directly attached to a motor. Necessary fixtures are to be prepared at the customer side.

Caution During Installation

- Do not use excessive force while mating parts
- Please watch for tilting during input section assembly and motor

Characteristics Data

Characteristics Data

Transmission angular accuracy

What is Transmission Angular Accuracy?

It is the difference between the measured output rotation angle and the theoretical angle, while input shaft is rotated with no load.

Ratio	Size				
	35	42	50	63	80
50	1.5	1.5	1.0	1.0	1.0
80	1.5	1.5	1.0	1.0	1.0
100	1.5	1.5	1.0	1.0	1.0
120	-	1.5	1.0	1.0	1.0
160	-	-	1.0	1.0	1.0

Table values are reference values.

Hysteresis loss

What is Hysteresis Loss?

When torque load is applied at the output shaft in alternate direction repeatedly with input shaft fixed, there is residual twisting angle when torque is back to zero.

In this context, hysteresis loss is the difference in the forward and backward twisting angle

Ratio	Size				
	35	42	50	63	80
50	2.0	2.0	2.0	2.0	2.0
80	1.0	1.0	1.0	1.0	1.0
100	1.0	1.0	1.0	1.0	1.0
120	-	1.0	1.0	1.0	1.0
160	-	-	1.0	1.0	1.0

Table values are reference values.

Characteristics Data

Maximum backlash

What is Maximum Backlash?

In this context, maximum backlash is the output backlash for oldham type input shaft.

(Backlash is zero for rigid type input, because gear engagement backlash is zero.)

Ratio	Size				
	35	42	50	63	80
50	35	29	25	20	16
80	22	18	16	12	10
100	18	15	13	10	8
120	-	12	10	8	6
160	-	-	8	6	5

Stiffness (Closed type, Unit)

What is Stiffness?

In this context, stiffness is the output shaft twisting angle and the spring coefficient, while torque load is applied to the output shaft with input side fixed.

- K1... Spring coefficient at 0 ~ T_1 torque
- K2... Spring coefficient at T_1 ~ T_2 torque
- K3... Spring coefficient at T_2 ~ torque

Ratio	Item	Unit	Size				
			35	42	50	63	80
-	T_1	Nm	2	3.9	7	14	29
-	T_2	Nm	6.9	12	25	48	108

*1 Reduction ratio is to be calculated by the formula in the previous page, using R value in this table.

*2 The maximum allowable value at the input rotation speed of 2000r/min

*3 The maximum torque when starting and stopping.

*4 The maximum torque when it receives shock.

*5 The maximum average input speed.

*6 The maximum input speed.

*7 The life time at the input rotation speed of 2000 r/min and nominal output torque.

Operation cycle example

Calculation formula for output torque

Average output torque	Tao	Nm	$Tao = \sqrt[3]{\frac{n_1 \cdot t_1 \cdot T_1 ^3 + n_2 \cdot t_2 \cdot T_2 ^3 + \dots + n_n \cdot t_n \cdot T_n ^3}{n_1 \cdot t_1 + n_2 \cdot t_2 + \dots + n_n \cdot t_n}}$
Peak output torque value	Tmo	Nm	$Tmo = \text{maximum value of } T_1, T_2, \dots, T_n$

Please make sure the peak output torque is below the maximum output torque in the specification table.

Calculation formula for input speed

Average output rotation speed	nao	r/min	$nao = \frac{n_1 \cdot t_1 + n_2 \cdot t_2 + \dots + n_n \cdot t_n}{t_1 + t_2 + \dots + t_n}$
Peak output rotation speed	nmo	r/min	$nmo = \text{maximum value of } n_1, n_2, \dots, n_n$
Average input speed	nai	r/min	$nai = nao \times R \quad (R = \text{ratio})$
Peak input speed value	nmi	r/min	$nmi = nmo \times R \quad (R = \text{ratio})$

Please make sure the peak input speed value is below the maximum input speed in the specification table.

Calculation formula for life span

Part life span for the elastic bearing	Lhe	h	$Lhe = 7000 \times \left(\frac{Tar}{Tao}\right)^3 \times \left(\frac{nar}{nai}\right)$
Rating torque	Tar	Nm	<i>Nominal output torque in the specification table</i>
Rating input rotation speed	nar	r/min	2000 r/min

Life span for the main bearing

Operation cycle example

External load

Life Estimation (Main Bearing)

Calculation formula for the largest working moment

Peak working moment	Mm	Nm	$Mm = Frm \cdot (Lr + L) + Fam \cdot La$
Peak radial load	Frm	N	$Frm = \text{maximum value of } Fr_1, Fr_2, \dots, Fr_n$
Peak axial load	Fam	N	$Fam = \text{maximum value of } Fa_1, Fa_2, \dots, Fa_n$

Please make sure the peak working moment is below the maximum allowable moment.

Calculation formula for the Average radial load, Axial load, Average output rotation speed, Average working moment

Average radial load	Fra	N	$Fra = \sqrt[10/3]{\frac{n_1 \cdot t_1 \cdot Fr ^{10/3} + n_2 \cdot t_2 \cdot Fr_2 ^{10/3} + \dots + n_n \cdot t_n \cdot Fr_n ^{10/3}}{n_1 \cdot t_1 + n_2 \cdot t_2 + \dots + n_n \cdot t_n}}$
Axial load	Faa	N	$Faa = \sqrt[10/3]{\frac{n_1 \cdot t_1 \cdot Fa_1 ^{10/3} + n_2 \cdot t_2 \cdot Fa_2 ^{10/3} + \dots + n_n \cdot t_n \cdot Fa_n ^{10/3}}{n_1 \cdot t_1 + n_2 \cdot t_2 + \dots + n_n \cdot t_n}}$
Average output rotation speed	nao	r/min	$nao = \frac{n_1 \cdot t_1 + n_2 \cdot t_2 + \dots + n_n \cdot t_n}{t_1 + t_2 + \dots + t_n}$
Average working moment	Ma	Nm	$Ma = Fra \cdot (Lr + L) + Faa \cdot La$

Calculation formula for the Loading factor, Equivalent radial load

Loading factor	Xc, Yc	-	$\frac{Faa}{Fra + 2Ma / Dm} \leq 1.5 \text{ in the case of, } Xc = 1.0, Yc = 0.45$
			$\frac{Faa}{Fra + 2Ma / Dm} > 1.5 \text{ in the case of, } Xc = 0.67, Yc = 0.67$
Equivalent radial load	Pc	N	$Pc = Xc \cdot (Fra + 2Ma/Dm) + Yc \cdot Faa$

Life span for the main bearing

Life span for the main bearing	Lhc	h	$Lhc = \frac{10^6}{60 \cdot nao} \cdot \left(\frac{C}{fw \cdot Pc} \right)^{\frac{10}{3}}$
Impact factor	fw	-	1.0: no shock
			1.2: with some shock
			1.5: with shock and vibration

Grease

Sumiplex MP No.2 (SUMICO LUBRICANT CO., LTD.)

Operating temperature range: 0~40°C (ambient temperature)

Grease application

- The quantity of grease applied to C should be adjusted depending on the mounting direction. C of the unit type product is already filled with the same quantity of grease as horizontal mounting.
- For vertical up/down, 50% of the space between input assy and casing inner wall should be filled with grease.
- If the amount of grease is not sufficient due to case design, please contact us.

Please apply grease according to the table below.

[grams]

Size	Applied part					
	A	B	C Horizontal	C Vertical Up	C Vertical Down	D

Transmitting Torque

Bolting

Refer to the table below for the bolt tightening torque.

Note that the transmittable torque varies depending on the bolt count (different between CF and CN) and tightening torque.

Tightening torque for bolts

Bolt Size	M3	M4	M5	M6	M8	M10
Tightening Torque (Nm)	1.9	4.3	8.7	15	36	71

Recommended bolt: Strength rating 12.9

Bolt specifications and transmitting torque (Closed type, Unit)

Output flange attachment

Size	35	42	50	63	80
Bolt Size	M4	M5	M6	M8	M10
Bolt Count	6	6	8	8	8
Bolt PCD [mm]	23	27	32	42	55
Tightening Torque [Nm]	4.3	8.7	15	36	71
Transmitting Torque [Nm]	56	106	238	566	1177

Internal gear attachment (CN)

Input Section Structure

There are two types of input section structure, spline type (self-centering feature) and rigid type.

Spline type (Self-centering)

Rigid type

Cam hole diameter

The diameter of the cam opening is customizable. Holes smaller than the 'standard hole size' in the table will be built in the spline type. Holes equal to or larger than the 'standard hole size' and smaller than the 'maximum hole size' will be built in the rigid type. Please contact us if you need sizes outside the specification in the table.

Cam dimension

[mm]

Installation and Assembly Instructions

WPC-□-□-C □

Shaft installation instruction

Please design the support structure for input shaft and output shaft so that both radial and axial loads are supported. (Diagram below shows an example)

Inside thrust load has an effect on the cam. Secure cam from possible axial movement.

WPC-□-□-C □

Attachment flange requirement

For an attachment flange that comes in contact with flex gear, please build the corner radius according to the table below, in order to prevent damage.

Item	35	42	50	63	80	[mm]
D	24.5	29	34	42	55	
R	1.2	1.2	1.4	1.5	2	
t	2	2.5	2.5	5	7	

Warm-up run

After assembly, "Warm-up run" is necessary before run with load / torque. The purpose is to coat the Flex gear and Internal gear surface evenly with enough grease in order to meet the load / torque performance.

Condition example

- Load - No load
- Input rotation speed - Start slowly from 1,000r/min or less, then accelerate up to 3,000r/min
- Test time - About 1 hour
- Output rotation angle - As large as possible

Motor Installation Procedure

WPU-□-□-C□

Procedure 1

- Attach the flange on to the motor
- Attach the input section assembly with elastic bearings to the motor shaft
- Attach the unit

* This model is not directly attached to a motor. Necessary fixtures are to be prepared at the customer side.

Procedure 2

- Attach the input section assembly with elastic bearings to the motor shaft
- Attach the flange on to the motor
- Attach the unit

* This model is not directly attached to a motor. Necessary fixtures are to be prepared at the customer side.

Caution During Installation

- Do not use excessive force while mating parts
- Please watch for tilting during input section assembly and motor

Characteristics Data

Transmission angular accuracy

What is Transmission Angular Accuracy?

It is the difference between the measured output rotation angle and the theoretical angle, while input shaft is rotated with no load.

Ratio	Size				
	35	42	50	63	80
50	2.0	2.0	1.5	1.0	1.0
80	1.5	1.5	1.0	1.0	1.0
100	1.5	1.5	1.0	1.0	1.0
120	-	1.5	1.0	1.0	1.0
160	-	-	1.0	1.0	1.0

Table values are reference values.

Hysteresis loss

What is Hysteresis Loss?

When torque load is applied at the output shaft in alternate direction repeatedly with input shaft fixed, there is residual twisting angle when torque is back to zero.

In this context, hysteresis loss is the difference in the forward and backward twisting angle

Ratio	Size				
	35	42	50	63	80
50	2.0	2.0	2.0	2.0	2.0
80	1.5	1.5	1.0	1.0	1.0
100	1.5	1.5	1.0	1.0	1.0
120	-	1.5	1.0	1.0	1.0
160	-	-	1.0	1.0	1.0

Table values are reference values.

Characteristics Data

Maximum backlash

What is Maximum Backlash?

In this context, maximum backlash is the output backlash for spline type input shaft.

(Backlash is zero for rigid type input, because gear engagement backlash is zero)

[arc min]

Ratio	Size				
	35	42	50	63	80
50	27	27	18	16	16
80	17	17	11	10	10
100	13	13	9	8	8
120	-	11	7	7	7
160	-	-	6	5	5

Maximum backlash

What is Maximum Backlash?

In this context, maximum backlash is the output backlash for spline type input shaft.

(Backlash is zero for rigid type input, because gear engagement backlash is zero)

*1 Reduction ratio is to be calculated by the formula in the previous page, using R value in this table.

*2 The maximum allowable value at the input rotation speed of 2000r/min

*3 The maximum torque when starting and stopping.

*4 The maximum torque when it receives shock.

*5 The maximum average input speed.

*6 The maximum input speed.

*7 The life time at the input rotation speed of 2000 r/min and nominal output torque.

Life Estimation (Elastic Bearing)

Life span for the elastic bearing

Operation Cycle Example

Calculation formula for output torque

Average output torque	Tao	Nm	$Tao = \sqrt[3]{\frac{n_1 \cdot t_1 \cdot T_1 ^3 + n_2 \cdot t_2 \cdot T_2 ^3 + \dots + n_n \cdot t_n \cdot T_n ^3}{n_1 \cdot t_1 + n_2 \cdot t_2 + \dots + n_n \cdot t_n}}$
Peak output torque value	Tmo	Nm	$Tmo = \text{maximum value of } T_1, T_2, \dots, T_n$

Please make sure the peak output torque is below the maximum output torque in the specification table.

Calculation formula for input speed

Average output rotation speed	nao	r/min	$nao = \frac{n_1 \cdot t_1 + n_2 \cdot t_2 + \dots + n_n \cdot t_n}{t_1 + t_2 + \dots + t_n}$
Peak output rotation speed	nmo	r/min	$nmo = \text{maximum value of } n_1, n_2, \dots, n_n$
Average input speed	nai	r/min	$nai = nao \times R \text{ (R = ratio)}$
Peak input speed value	nmi	r/min	$nmi = nmo \times R \text{ (R = ratio)}$

Please make sure the peak input speed value is below the maximum input speed in the specification table.

Calculation formula for life span

Part life span for the elastic bearing	Lhe	h	$Lhe = 7000 \times \left(\frac{Tar}{Tao} \right)^3 \times \left(\frac{nar}{nai} \right)$
Rating torque	Tar	Nm	<i>Nominal output torque in the specification table</i>
Rating input rotation speed	nar	r/min	2000 r/min

Lubricant Information

Grease

Sumiplex MP No.2 (SUMICO LUBRICANT CO., LTD.)

Operating temperature range: 0~40°C (ambient temperature)

Grease application

- The quantity of grease applied to C should be adjusted depending on the mounting direction. C of the unit type product is already filled with the same quantity of grease as horizontal mounting.
- For vertical up/down, 50% of the space between input assy and casing inner wall should be filled with grease.
- If the amount of grease is not sufficient due to case design, please contact us.

Please apply grease according to the table below.

[grams]

Size	Applied part

Installation and Assembly Instructions

WPC-□-□-C □

Shaft installation instruction

Please design the support structure for input shaft and output shaft so that both radial and axial loads are supported. (Diagram below shows an example)

Inside thrust load has an effect on the cam. Secure cam from possible axial movement.

Warm-up run

After assembly, "Warm-up run" is necessary before run with load / torque. The purpose is to coat the Flex gear and Internal gear surface evenly with enough grease in order to meet the load / torque performance.

Condition example

- Load - No load
- Input rotation speed - Start slowly from 1,000r/min or less, then accelerate up to 3,000r/min
- Test time - About 1 hour
- Output rotation angle - As large as possible

Reducer Model/ Specifications	Dimensions	Life Estimation (Elastic Bearing)	Life Estimation (Main Bearing)	Maximum Load at Input Shaft	Lubricant Information	Attachment Fixture Requirement Info	Transmitting Torque	Installation & Assembly	Characteristics Data

Characteristics Data

Transmission angular accuracy

What is Transmission Angular Accuracy?

It is the difference between the measured output rotation angle and the theoretical angle, while input shaft is rotated with no load.

Ratio	Size				
	35	42	50	63	80
50	2.0	2.0	1.5	1.0	1.0
80	1.5	1.5	1.0	1.0	1.0
100	1.5	1.5	1.0	1.0	1.0
120	-	1.5	1.0	1.0	1.0

Table values are reference values.

Hysteresis loss

What is Hysteresis Loss?

When torque load is applied at the output shaft in alternate direction repeatedly with input shaft fixed, there is residual twisting angle when torque is back to zero.

In this context, hysteresis loss is the difference in the forward and backward twisting angle

Ratio	Size				
	35	42	50	63	80
50	2.0	2.0	2.0	2.0	2.0
80	1.5	1.5	1.0	1.0	1.0
100	1.5	1.5	1.0	1.0	1.0
120	-	1.5	1.0	1.0	1.0

Table values are reference values.

Characteristics Data

Maximum backlash

What is Maximum Backlash?

In this context, maximum backlash is the output backlash for spline type input shaft. (Backlash is zero for rigid type input, because gear engagement backlash is zero.)

Ratio	Size				
	35	42	50	63	80
50	27	27	18	16	16
80	17	17	11	10	10
100	13	13	9	8	8
120	-	11	7	7	7

Stiffness (Closed type, Unit)

What is Stiffness?

In this context, stiffness is the output shaft twisting angle and the spring coefficient, while torque load is applied to the output shaft with input side fixed.

- K1... Spring coefficient at 0 ~ T_1 torque
- K2... Spring coefficient at T_1 ~ T_2 torque
- K3... Spring coefficient at T_2 ~ torque

Ratio	Item	Unit	Size				
			35	42	50	63	80
-	T_1	Nm	2	3.9	7	14	29
-	T_2	Nm	6.9	12	25	48	108
50	K_1	$\times 10^4 \text{Nm/rad}$	0.39	0.66	1.1	2.2	4.6
	K_2	$\times 10^4 \text{Nm/rad}$	0.47	0.75	1.4	2.6	5.1
	K_3	$\times 10^4 \text{Nm/rad}$	0.52	0.82	1.4	2.7	5.6
	θ_1	arcmin	1.7	2.0	2.2	2.2	2.2
	θ_2	arcmin	5.0	5.5	6.3	6.4	7.2
80 100 120	K_1	$\times 10^4 \text{Nm/rad}$	0.44	0.86	1.6	2.9	6.2
	K_2	$\times 10^4 \text{Nm/rad}$	0.60	1.0	1.9	3.2	6.5
	K_3	$\times 10^4 \text{Nm/rad}$	0.72	1.0	1.9	3.1	6.5
	θ_1	arcmin	1.6	1.6	1.5	1.7	1.6
	θ_2	arcmin	4.0	4.1	4.6	5.2	5.7

Average value shown in the table.

Characteristics Data

Starting torque (Closed type, Unit)

What is Starting Torque?

Input torque needed for input side to start rotating (no load, ambient temperature: 25°C).

[cNm]

Ratio	Size				
	35	42	50	63	80
50	7.0	11	14	17	26
80	6.8	9.5	13	24	26
100	6.4	9.4	11	14	20
120	-	8.1	9.3	14	20

*1 For reference only. Torque value may vary depending on the condition.

*2 Charts does not show effects due to rotation resistance of bearings and oil seals on the input side.

Output starting torque (Closed type, Unit)

What is Output Starting Torque?

Output torque needed for output side to start rotating (no load, ambient temperature: 25°C)

[Nm]

Ratio	Size				
	35	42	50	63	80
50	1.2	3.6	4.4	5.8	13
80	1.6	3.9	7.2	13	26
100	1.7	5.7	8.6	9.4	23
120	-	4.2	8.1	10	30

*1 For reference only. Torque value may vary depending on the condition.

*2 Charts does not show effects due to rotation resistance of bearings and oil seals on the input side.

No-load running torque (Closed type, Unit)

What is No-load Running Torque?

Input torque needed to keep it running with no load (average value, ambient temperature: 25°C)

[cNm]

Ratio	Input Rotation Speed	Size				
		35	42	50	63	80
50	500r/min	3.4	7.5	9.2	17	35
	1000r/min	4.3	8.2	11	18	37
	2000r/min	5.0	8.5	13	18	39
	3500r/min	5.4	11	14	22	38

*1 Reduction ratio is to be calculated by the formula in the previous page, using R value in this table.

*2 The maximum allowable value at the input rotation speed of 2000r/min

*3 The maximum torque when starting and stopping.

*4 The maximum average input speed.

*5 The maximum input speed.

*6 The life time at the input rotation speed of 2000 r/min and nominal output torque.

Dimensions

Gearhead Type

Precautions

When attaching equipment parts to the output flange, use the supplied O-rings or implement your own grease leakage prevention measures.

Customer Service and Support

Distinction in Service and Support

Nidec Drive Technology Corporation has invested heavily in building a global customer service and application support network that will meet the evolving needs of our customers. By leveraging our global infrastructure, our OEM customers maintain their competitiveness and profitability at home while able to expand into emerging markets abroad without any drop-off of service and support.

Nidec DTC pledges that we will continue to expand our service and support network footprint globally, and continuously strive for perfection as a dependable partner to our customers. In this section you will learn about our service and support capabilities that we will leverage in order to provide you peace of mind.

Online and Phone Support

Resolve your technical issues quickly and accurately, without disrupting your business. When you do business with Nidec Drive Technology, your company and your customers have immediate access to our global network of support centers and resources. Whether you need help designing, installing, and maintaining equipment or diagnosing an operating issue, Nidec DTC will deliver the tools and information that you need in order to insure that your equipment is running to perfection.

Contact your local sales office for immediate support either over the phone or in the field. All customer accounts in North America have a dedicated Technical Support Engineer, knowledgeable about your business, on-standby ready to support you and your customers. If you do not know who to contact, please call our 1-800 number in order to get properly directed to the right person for help.

For online support, please visit our website in order to download any drawings, instruction manuals, or technical performance specifications that you require. All catalogs and brochures are easily downloadable on the website. If you prefer to inquire about an issue or for more information, please do not hesitate to submit your request online or email us at the address listed below.

Training Services

Investing our time in you, so together we build better, more competitive product for your customer. As the industrial world becomes increasingly competitive, new technologies are introduced every year requiring manufacturers to constantly rationalize and update existing designs. As a result, successful manufacturers realize the absolute need for product training.

Nidec DTC has a network of engineers that are factory trained and authorized to provide your workforce solid training on our products and basic power transmission concepts. The main objective of our standard program and materials is to better empower your workforce to size and select gearboxes for any motion control applications. We provide this service at no cost to our customers, because we see the value in building a more knowledgeable customer and helping them more quickly react to equipment design revisions when needed.

Other manufacturers are not as forthcoming with sharing information with their customers, an attempt to hide their higher manufacturing costs or to use unreleased performance data as a "product differentiator". Nidec DTC views their customers as long term partners and trains and shares information freely based on that vision.

Training classes can be conducted online, at any of our sales branches or offices, or at key distributor branches when requested. Nidec DTC can also bring the training session to your facility in order to make better use of your time and costs. A thorough hands-on training seminar can be provided at our North American headquarters in Glendale Heights, where customers can get the opportunity to completely assemble and test our products.

The Nidec DTC training program options provide support for any budget. Our training programs improve your employees' skill and knowledge competencies in the areas of power transmission and motion control while addressing any location, time, travel and productivity constraints. Contact your local sales office today in order to get a product refresher on your calendar.

Selection Tool Configurator

Nidec Drive Technology's Online Product Configurator makes it easier than ever for engineers to incorporate our products into their drive system design. Our configurator allows our customers to select from wide range of servo motor manufacturer models to ensure flawless fitment with our products. With over 75 motor manufacturers included, there is a good possibility we have a solution ready to go.

In addition to motor sizing, our configurator also allows our customers to select gearheads based on application. These applications include rotary tables, belt conveyors, rack and pinion drives, lifting and lowering devices, ball screws, drive gears, drive carriages and robot joints. After selecting the application template, customers can then input the application load parameters and motion profile. The proper frame size and reduction ratio are then determined, with motor selection as the final last step.

Once sizing is complete, our configurator will then display the full part number, along with gearbox and motor technical specifications. This part number includes the motor mounting adapter, which can be sent directly to our sales support team for pricing & delivery.

Drawings and models are also available in PDF, DXF, IGS and STEP formats, making it simple for machine designers to quickly drop them into machine schematics to check for proper fitment. We have seasoned application engineers standing by to assist with any sizing or selection questions.
